IR-200 (OSIR)

Foundational Incident Response

Summary:

Learners in IR-200 gain essential incident response skills, covering detection, analysis, containment, eradication, and recovery. This boosts their ability to mitigate cyber attacks and reduce organizational risk. Successful exam takers earn the OSIR certification.

Great For:

- Incident responders
- SOC analysts
- Blue team specialists

Learn:

- Identifying the lifecycle of an incident
- Analyzing security events and logs for root cause
- Coordinating response activities across teams
- Collecting and preserving evidence for investigations
- Applying incident response procedures to contain threats
- Ensuring systems recovery and post-incident reporting

Benefits:

- **Master key incident response concepts:** Learn the full incident lifecycle, from detection to recovery
- **Develop practical response skills:** Gain hands-on experience in analyzing and mitigating cyber attacks
- **Apply advanced response techniques:** Learn to manage incidents effectively and reduce organizational impact
- **Enhance your cybersecurity role:** Equip yourself with essential incident response skills applicable across all cybersecurity positions
