

TH-200 (OSTH) Foundational Threat Hunting

Summary:

Learners develop key threat hunting skills in TH-200, focusing on identifying threats with and without IOCs, enabling them to proactively detect and mitigate attacks. This reduces organizational risk by enhancing their ability to respond to hidden and emerging threats. Those who pass the exam receive the OSTH certification.

Great For:

- Threat hunters
- SOC analysts
- Incident responders
- Security professionals wanting to gain essential threat analysis skills relevant to all cybersecurity roles

Learn:

- Threat actor tactics and techniques
- Hunting with and without IOCs
- Data analysis for threat detection
- Advanced threat hunting strategies
- Proactively mitigating hidden and emerging threats

Benefits:

- **Master foundational threat hunting concepts:** Understand the tactics of diverse threat actors and the principles of proactive threat detection
- **Develop practical threat hunting skills:** Gain hands-on experience in analyzing network and endpoint data to uncover hidden threats
- **Apply advanced hunting techniques:** Learn to detect threats without relying on Indicators of Compromise (IoCs) and develop custom strategies to stay ahead of attackers
- **Enhance your cybersecurity role:** Equip yourself with essential threat hunting skills applicable across all cybersecurity positions
